MODULE 6 - AUTOMATION & FLOW MODULE

Step 1: Create Screen Flow for Player Selection

Build an interactive Salesforce Screen Flow to enable users to select a cricket player from the roster using drag-and-drop in Flow Builder

Salesforce Flow Builder — ELEMENTS (Drag & Drop)

Screen
User input interface for selection

Get Records
Retrieve Player records from Player__c object

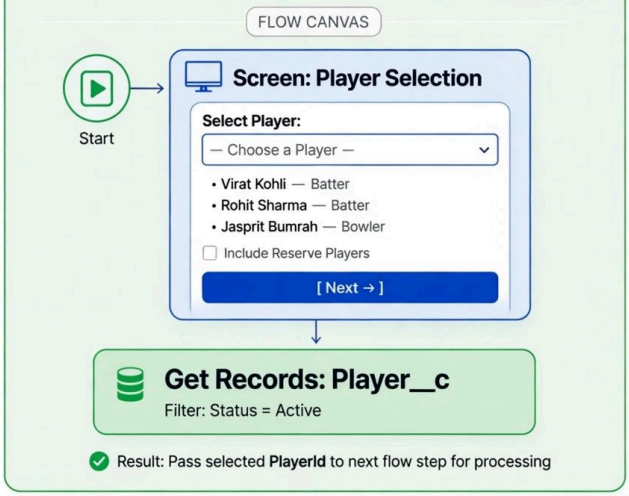

Decision
Check if player is Active / Available

Assignment
Assign to selectedPlayer variable

TIP: Drag elements onto the canvas → configure properties → connect with connectors

Screen Flow: Player Selection

SCREEN FLOW

Result: Pass selected **PlayerId** to next flow step for processing

MODULE 6 - AUTOMATION & FLOW MODULE

Step 2: Add Team Picklist Functionality

Create a Picklist field for Team on Player__c to filter by team: CSK, MI, RCB for dynamic player selection

Salesforce Setup — Picklist Field Creation

Object Manager → Player__c
Navigate to Fields & Relationships

New → Picklist Field
Field Label: Team • Field Name: Team__c

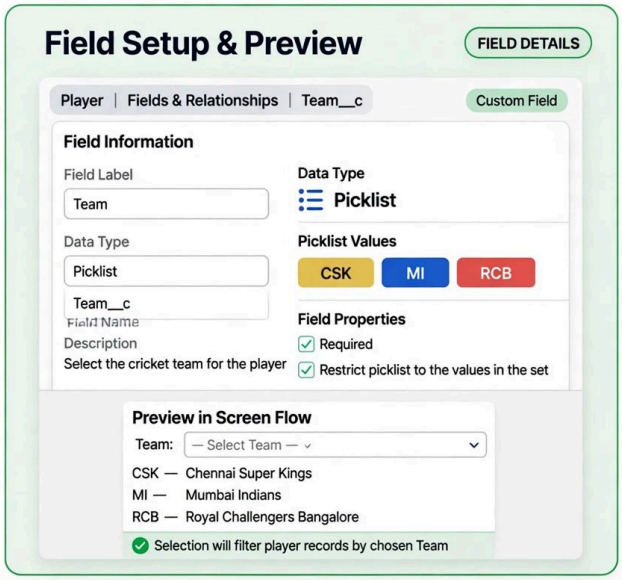

3. Define Picklist Values

- CSK — Chennai Super Kings
- MI — Mumbai Indians
- RCB — Royal Challengers Bangalore

☑ Use global picklist value set: ☐ → Use these values

TIP: Keep values short, API-friendly. Restrict picklist to defined values = ON

Field Setup & Preview

MODULE 6 - AUTOMATION & FLOW MODULE

Step 3: Retrieve Player Records using Get Records

Configure the Get Records element in Flow to fetch Player__c records filtered by the selected Team picklist for dynamic data retrieval

Get Records Element — Flow Configuration

Element: Get Records
Purpose: Retrieve Player__c records from Salesforce

Filter Configuration

Object: Player__c

Filter Conditions: Team__c — Equals — {{selectedTeam} Variable from Screen

Status__c Equals — Active

Sort Order:
Name → Ascending

How Many Records to Get:
○ All records that match the conditions

TIP: Use variable {{selectedTeam} from Screen to filter dynamically based on user picklist

Flow Builder — Get Records Diagram

DATA RETRIEVAL

FLOW SEQUENCE

Result: {playersList} now holds all active players for the chosen team, ready for next element

Variable Type: Collection of Records — Resource API Name: playersList

MODULE 6 - AUTOMATION & FLOW MODULE

Step 4: Display Player Info using Data Table

Add a Data Table component to the Flow Screen to display player statistics retrieved from the Get Records element for easy viewing

Data Table Component — Flow Screen Setup

Component: Data Table
Displays a collection of records in tabular format

Component Configuration

Data Source:

{!playersList} — Collection of Player__c records

Columns to Display:

Name	Team	Number	Average (2dp)

Table Settings:
- ☑ Enable Sorting
- Enable Pagination (Rows per page: 5)

TIP: Map Data Table to the {playersList} collection to update dynamicilly after Get Records

Flow Screen Preview — Player Statistics Table

DATA TABLE PREVIEW

SCREEN: Player Info

Selected Team: CSK — Player Statistics

Name	Team	Runs	Average	Role
Virat Kohli	CSK	542	54.20	Batter
Rohit Sharma	CSK	411	41.10	Batter
Ravindra Jadeja	CSK	189	31.50	All-Rounder

‹ 1 of 1 › | 3 records

Data sourced from {playersList} •
Sorted by Runs (descending)

Data Table updates automatically when Team selection changes in previous Screen

MODULE 6 - AUTOMATION & FLOW MODULE

Step 5: Add Player Flow to CRICKSTATS Home Page

Embed the Player Selection Flow into the CRICKSTATS Home Page using Lightning App Builder to make it available for users

Lightning App Builder — Add Flow Component

1. Open Lightning App Builder
Setup → Lightning App Builder → CRICKSTATS Home Page

2. Drag Flow Component to Page
Components panel → Flow → drag to page canvas

Flow: Player_Selection_Flow
Label: Player Selection — Team & Stats
☑ Show Header (checked)

Activation
☑ Activate for Desktop
☑ Assign to CRICKSTATS App
☑ Set as Org Default for Home Page

Preview & Success

LIVE PREVIEW

Home | Overview | Reports | Players

Player Selection — Team & Stats

Select Team: CSK
[View Players →]

Select Team:

Virat Kohli	CSK	54.20 Avg
Rohit Sharma	CSK	41.10 Avg

Data updates in real-time from Flow

Deployment Successful!

- Flow is now live on CRICKSTATS Home Page
- Users can select Team → view player stats instantly
- Integrated with Lightning Home Page

Status: ACTIVATED • Version 1.0 • Live

MODULE 6 COMPLETE — Player Selection Flow is now live and automated! 🎉
Automation & Flow now ready for use in CRICKSTATS
